PROJECTS

Website Development at Beeclue

This is the Website Development Project where I have worked on various websites with the team members of Beeclue Team.

My Portfolio

This is my personal project that I have worked on with HTML, CSS and Javascript. This Project is based on my personalized experience.

Todo App

A Simple todo application that allows user to manage their tasks efficiently. The app provides the functionality to add, read, update, and delete todos, among other features. Todo-App is a web application built using the Flask web framework, HTML, CSS. It allows users to manage their todo list by providing functionalities to add, read, update and delete todos.

Birthday Countdown App

The Birthday Countdown App is a simple web application that counts down the time left for the next birthday or any important date. It also displays a message saying "Happy Birthday" if the current date matches the birthday date or if the countdown timer reaches zero. In addition to the countdown feature, the app also includes a confetti library that creates a shower of particles when it's the user's birthday or when the countdown timer reaches zero..
